

Press information – **raumplus** totally practice-oriented

## ROOM-IN-ROOM

Combining efficient procedures with patient privacy and discretion in medical practices often presents a spatial challenge. **raumplus** sliding door and partition systems offer solutions which can be customised to fit exactly into existing floor plans and procedures. Intelligent room service for medical practices – without any unpleasant side effects.

In larger specialist or shared medical practices in particular it is necessary to examine, treat or provide after-care to several patients at once. Badly laid-out rooms can be the cause of additional waiting times, stretching the patients' patience and reducing the practice's efficiency. Premises offering floor plans which are perfectly suited to procedures in a wide range of specialist medical practices are, however, rare. This is where **raumplus** can provide flexible assistance. The sliding door and partition wall systems from Bremen make it possible to create a room within a room – of any size and with variable access.

A dermatological practice in Münster/Germany is a good illustration of exactly how this can look. A 25 m<sup>2</sup> freestanding cube was integrated into the floor plan, providing space for three separate treatment rooms with an adjacent lab area. The **raumplus** Series S3000 sliding doors, made in rear-painted glass and with surface-mounted moulded grip recesses, provide patients with access to Treatment Rooms A, B and C. Doctors and assistants can also enter the cube and lab area from doors at the rear. This allows structuring of both the practice's daily routines and its architecture while delivering patients with design "on prescription".  
Next, please!

Should you publish this article we would be grateful if you could name **raumplus** as the manufacturer.
